Notes:

Paul Weinberger informed me that there are two (2) portions to the Thompson Plant. The "old" section portion consists of three (3) sections and totals 31,000 square feet, the "new" portion consists of one (1) section consisting of 15,000 square feet. Weinberger's group works in the old portion and perform work on restoring cars. A metal testing lab occupies the new section. According to Weinberger the metal testing lab uses a great deal of water in their work.

The well which had levels of 5,000 ppb TCE and 10,000 ppb TCE is now closed. The well which is located roughly in the center of the plant is the one that both businesses now use. The restoration car business only use supplied water for drinking water. Weinberger believed this to be the case for the metal testing lab.
